Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

mailroom@bskb.com

Office Action Summary

Application No.

10/575,756

Applicant(s)

KATO ET AL.

Examiner

Anthony J. Green

Art Unit

1793

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 09 July 2008.
2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 3, 4 and 6-15 is/are pending in the application.
4a) Of the above claim(s) _____ is/are withdrawn from consideration.
5) ☐ Claim(s) _____ is/are allowed.
6) ☒ Claim(s) 3, 4 and 6-15 is/are rejected.
7) ☐ Claim(s) _____ is/are objected to.
8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
2) ☐ Notice of Draftperson's Patent Drawing Review (PTO-948)
3) ☒ Information Disclosure Statement(s) (PTO/550)
Paper No(s)/Mail Date 10/23/07 & 06/19/2008
4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
5) ☐ Notice of Informal Patent Application
6) ☐ Other: _____

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 09 July 2008 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 3-4 and 6-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese Patent Specification No. JP 2001-233661 A in view of Lin (US Patent No. 5,518,980 A) for the reasons set forth in the previous office action and which are herein incorporated by reference.

Applicant argues that the instant claims are not obvious over the combination of references as they still fail to suggest the present invention achieving excellent setting properties, as shown in the enclosed Declaration, by using calcium hydroxide having an average particle diameter of 3 μ m or less. Such results are completely unexpected.

That is, as shown by the present Examples and Comparative examples as well as the enclosed Declaration, it is evident that the present invention achieves superior setting times for examples 1-3 compared to comparative examples 2-5 as shown in Table 1 at page 10 of the specification and Table A at page 2 of the enclosed Declaration. Such results are unexpected. Thus, any hypothetical *prima facie* case of obviousness is moot.

It is the position of the examiner that the declaration is not commensurate in scope with the instant claims as applicant has not demonstrated that a particle size of 3 microns achieves superior setting times as compared to the use of a calcium hydroxide having a particle size of greater than 3 microns. Note that the declaration shows the setting times achieved when using calcium hydroxide particles having a particle size of 2.5, 1.3 and .5 microns (which is below the claimed limitation of 3 microns or less) as compared with calcium hydroxide particles having a particle size of 3.8, 6.5, 23.5 and 62.0 (which is above the claimed limitation of 3 microns or less) however applicant has not shown the results achieved when using calcium hydroxide particles having a size of 3 microns. That is, the closest particle size applicant shows which is below 3 or less is 2.5 and the closest above is 3.8. Accordingly it is the position of the examiner that since applicant has not adequately shown that unexpected results are achieved when using calcium hydroxide having a particle size of 3 microns (the upper limit of the particle size being claimed) as compared with one having a particle size of slightly greater than 3 microns, the declaration is not commensurate in scope with the instant claims.

4. Claims 3-4 and 6-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kikuchi et al (US Patent No. 4,650,523 A) in view of Lin (US Patent No. 5,518,980 A) for the reasons set forth in the previous office action and which are herein incorporated by reference.

Applicant argues that the instant claims are not obvious over the combination of references as they still fail to suggest the present invention achieving excellent setting properties, as shown in the enclosed Declaration, by using calcium hydroxide having an average particle diameter of 3 μm or less. Such results are completely unexpected. That is, as shown by the present Examples and Comparative examples as well as the enclosed Declaration, it is evident that the present invention achieves superior setting times for examples 1-3 compared to comparative examples 2-5 as shown in Table 1 at page 10 of the specification and Table A at page 2 of the enclosed Declaration. Such results are unexpected. Thus, any hypothetical *prima facie* case of obviousness is moot.

It is the position of the examiner that the declaration is not commensurate in scope with the instant claims as applicant has not demonstrated that a particle size of 3 microns achieves superior setting times as compared to the use of a calcium hydroxide having a particle size of greater than 3 microns. Note that the declaration shows the setting times achieved when using calcium hydroxide particles having a particle size of 2.5, 1.3 and .5 microns (which is below the claimed limitation of 3 microns or less) as compared with calcium hydroxide particles having a particle size of 3.8, 6.5, 23.5 and 62.0 (which is above the claimed limitation of 3 microns or less) however applicant has not shown the results achieved when using calcium hydroxide particles having a size of

3 microns. That is, the closest particle size applicant shows which is below 3 or less is 2.5 and the closest above is 3.8. Accordingly it is the position of the examiner that since applicant has not adequately shown that unexpected results are achieved when using calcium hydroxide having a particle size of 3 microns (the upper limit of the particle size being claimed) as compared with one having a particle size of slightly greater than 3 microns, the declaration is not commensurate in scope with the instant claims.

5. Claims 3-4 and 6-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Simeonov et al (US Patent No. 4,205,998 A) in view of Lin (US Patent No. 5,518,980 A) for the reasons set forth in the previous office action and which are herein incorporated by reference.

Applicant argues that the instant claims are not obvious over the combination of references as they still fail to suggest the present invention achieving excellent setting properties, as shown in the enclosed Declaration, by using calcium hydroxide having an average particle diameter of 3 μ m or less. Such results are completely unexpected. That is, as shown by the present Examples and Comparative examples as well as the enclosed Declaration, it is evident that the present invention achieves superior setting times for examples 1-3 compared to comparative examples 2-5 as shown in Table 1 at page 10 of the specification and Table A at page 2 of the enclosed Declaration. Such results are unexpected. Thus, any hypothetical *prima facie* case of obviousness is moot.

It is the position of the examiner that the declaration is not commensurate in scope with the instant claims as applicant has not demonstrated that a particle size of 3 microns achieves superior setting times as compared to the use of a calcium hydroxide having a particle size of greater than 3 microns. Note that the declaration shows the setting times achieved when using calcium hydroxide particles having a particle size of 2.5, 1.3 and .5 microns (which is below the claimed limitation of 3 microns or less) as compared with calcium hydroxide particles having a particle size of 3.8, 6.5, 23.5 and 62.0 (which is above the claimed limitation of 3 microns or less) however applicant has not shown the results achieved when using calcium hydroxide particles having a size of 3 microns. That is, the closest particle size applicant shows which is below 3 or less is 2.5 and the closest above is 3.8. Accordingly it is the position of the examiner that since applicant has not adequately shown that unexpected results are achieved when using calcium hydroxide having a particle size of 3 microns (the upper limit of the particle size being claimed) as compared with one having a particle size of slightly greater than 3 microns, the declaration is not commensurate in scope with the instant claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anthony J. Green whose telephone number is 571-272-1367. The examiner can normally be reached on Monday-Thursday 6:30-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jerry Lorengo can be reached on 571-272-1233. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
